AI & Blockchain

ABOUT US

Blocktogo

Is an Indonesia-based Blockchain Solution Company. Founded in 2019, we have grown and trusted by leading Private Companies, BUMNs and Ministries in Indonesia to consult and develop Blockchain-based solutions. Beyond crypto currency, Blocktogo brings Blockchain functional application to help businesses.

What we do

We provide end to end blockchain-based solution. From consulting, integration, to development are available.

Why we are different

We strive to provide a solution that can work technically and economically. With our experience helping BUMN and companies integrating with Blockchain technology, we aim to lead and revolutionize the web3 industry in Indonesia.

What are our values

We believe in transforming a business to web3 is more than just a technology adoption. It requires passion, people, and technology.

About Us

Our Clients

About Us

We are a proud member of

Blockchain Technology in a nutshell

Transparent

All of Blockchain transactions can be seen, verify, and trace through the help of Blockchain explorer. However, we don't see any names in those transactions but alphanumeric characters that represent account address.

Immutable

One of Blockchain defense mechanism is immutability. It means that any transaction or data that has been recorded in Blockchain cannot be tempered even by its creator.

Secure

Decentralization creates a collective effort in securing the network by its participants. Furthermore, cryptography implementation in each of its transaction contributes to even a more secure network.

BLOCKCHAIN TIMELINE.

2009

Satoshi Nakamoto released Bitcoin Whitepaper and thus Bitcoin network started as the first Usecase of Blockchain technology.

2014

Ethereum is founded and touted as Blockchain 2.0 with its smart contract ability to develop DApps.

2020 - Now

The rise and fall of NFTs and Metaverse concept in web3.

ARTIFICIAL INTELLEGEENCE TIMELINE.

1997

Deep Blue wins against chess world champion Garry Kasparov.

2011

Apple released Siri as intelligent speech assistant integrated to their iPhone 4s.

2022 - Now

The rise of ChatGPT and other generative AI

LONG STORY SHORT.

Blockchain & AI

Blockchain and AI will be the key technology for the future of web3. These two will be used hand in hand to create lot of things to enable full decentralizations and digital ownerships.

It may go in their respective timeline but there will be time these two cross paths and create something powerful.
