COVID-19 CONTROL ADVISORY !!

AI COVID-19 scan analyzer operational soon

23 March 2020 -- Mayor Benjie Magalong announced that the Artificial Intelligence COVID19 CT Scan Analyzer, a new technology of Huawei company that helps doctors detect Coronavirus Disease, will be operational soon at the Baguio General Hospital.

"For the past two days, our city through our Management Information and Technical Division (MITD) under Executive Asst. V Philip Puzon has been working together with the technical team of Huawei and Baguio doctors to set up the system in BGH. It will be the first of its kind in the country," the mayor said.

The mayor said the AI analyzer is a diagnostic system that would help our doctors identify highly suspicious COVID19 cases.

"Unlike the current screening test kits which would take 4-5 days, the AI system only takes 2 min. Hopefully it will be up and running by Monday or Tuesday. Test runs ongoing," he added

Puzon thanked the Huawei-EVI support team and the MITD team which has been attending to all information and communication technology and closed circuit television requirements of the city in the COVID operations. - Aileen P. Refuerzo

"The screening program can greatly improve the hospital's diagnostic efficiency, enhance the confidence of the Ecuadorian people to fight the epidemic."

--The clinician of Quito Southern General Hospital, Ecuador

Collaborate with BPPT to Develop National Digital Infrastructure

MOU Signing Between Huawei Indonesia with Assessment and Application of Technology Agency (BPPT)

October 12th, 2020 via Online Video Conference

BPPT, Huawei team up to develop AI, cloud and 5G

The Jakarta Post

Jakarta / Tue, October 13, 2020 / 05:42 pm

The Agency for the Assessment and Application of Technology (BPPT) on Monday signed a memorandum of understanding with Chinese telecommunications giant Huawei to **develop Indonesia's digital ecosystem** and **develop talent through the transfer of knowledge and technologies**. The agency and Huawei will focus on the development of **artificial intelligence (AI), cloud and 5G technology**.

To Build One AI Computing Center and Four Platforms to Enable Industry Intelligence

Provide inclusive public computing services for local enterprises through government policies.

Build an independent and controllable computing service platform to meet the computing power requirements of urban AI development.

Public computing service platform

Based on the characteristics of the local city industry, building AI application benchmarks.

Smart city, smart manufacturing, smart transportation, smart healthcare, and smart networking

Application innovation and incubation platform

Build an ecosystem innovation center. Drive the centralized and intensive development of the AI industry.

Aggregate advantages of AI technologies and enterprise resources;
Start-up support, technical enablement, and application promotion.

Industry aggregation development platform

Support scientific research innovation and AI talent cultivation. Achieve breakthroughs in common AI technologies.

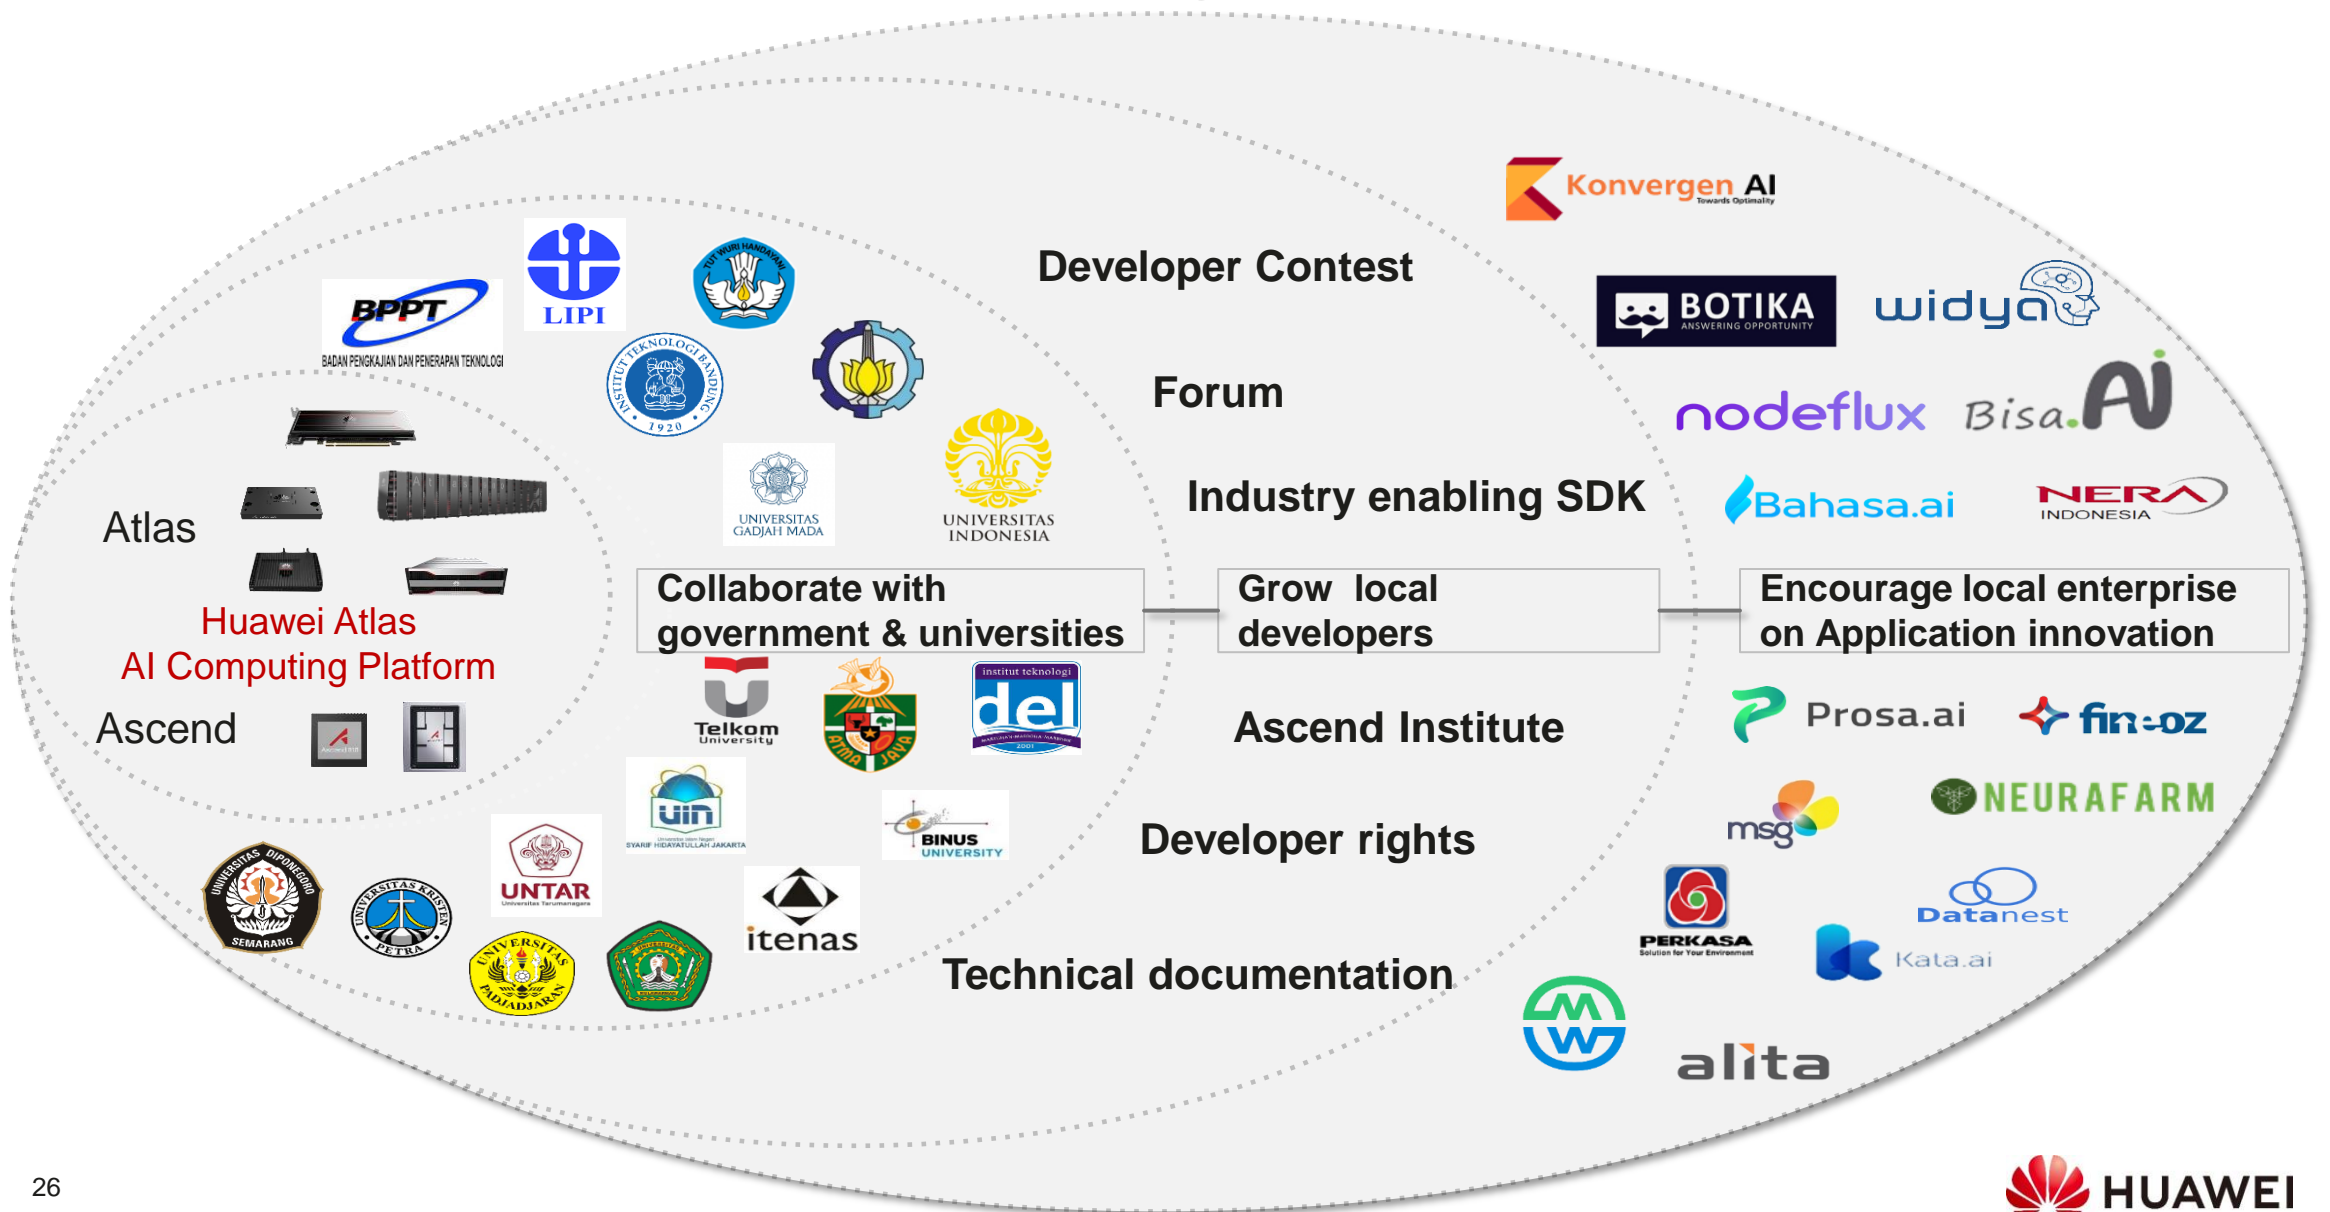

Research innovation and talent cultivation centered on computing centers by leveraging city talent concentration advantages.

Scientific research innovation & talent development platform

Four platforms ---- covering government, industry, education and research, and enable industry intelligence with AI computing power clusters.

One Fundamental platform ---- **AI Computing Center**

Cultivate the Fertile Soil of the New Digital World in Indonesia

Building All-Scenario Intelligence with Intelligent Twins!
